

Potable Water Tank Eco-Line ELJP 1000l

**3,671.55 PLN tax
included**

Reference: -

Capacity: 1000l, 1500l, 2000l, 2500l, 5000l

- Capacity from 1500 to 5000 l
- Single-walled polyethylene construction
- Attested (PZH)

Potable Water Tank Eco-Line

The Swimer Potable Water Tank aboveground potable water tank is made of polyethylene. The design of the **potable water tanks is single-walled**. Three capacities are available: 1000 l, 1500 l, 2000 l, 2500 l and 5000 l.

The water tanks in the Eco-Line series are primarily designed **for the storage and distribution of drinking water**. They are also used for the storage of process water. Swimer tanks are suitable for both industrial plants and private households. This makes the Swimer Water Tank widely applicable and versatile.

The Swimer single-walled drinking water tanks are approved by the PZH. This means that drinking water can be stored in them without any risk. **Water tanks** are fully leakproof. They are made using the rotational moulding method, so they have no joints. This minimises the risk of stresses leading to ruptures. The risk of leakage is reduced to a minimum. In addition, the material polyethylene is highly resistant to mechanical damage. It is durable and does not corrode or fade when exposed to the sun. It also exhibits high resistance to contact with chemicals. It is a plastic which is durable, lightweight and easy to maintain. As a result, the tank can be used for many years without failure. The tank is equipped with carrying handles, which makes transportation and unloading much easier.

The manufacturer provides a 5-year warranty on the watertightness of the tank.

Basic equipment of **the Potable Water Tank Eco-Line**

- 440 mm inspection hatch,
- automatic air vent which regulates pressure inside the tank,
- 2" filler neck with external thread,
- 2" bottom drain with 2" ball valve (brass) with female thread.

Optional equipment for Potable Water Tank Eco-Line (on request)

- Lipremos Sonic Pro precision liquid measuring system,
- Clock level indicator,
- 2" filler neck with STORZ connector,
- Bottom drain 2" with ball valve terminated with STORZ connector.

We also offer [the Comfort-Line Potable Water Tank](#).

Technical data for Eco-Line tanks

Version	Liquid	Capacity [l]	Height [mm]	Diameter [mm]	Filling height [cm]	Manhole diameter [mm]
Eco-Line Basic	Drinking water	1000	1300	1100	150	440
		1500	1600	1250		
		2000	1450	1400	165	
		2500	1700	1550	150	
		5000	1700	2200
