

## Ecologis Biopreparation Activator

**106.89 PLN tax included**

Reference: 13-109

- 4 product doses (1000 g)
- Ensures optimum operation of the wastewater treatment plant at start-up and restart-up
- For use in: septic tanks, sewers, toilets, treatment plants, settling tanks, drains and separators

### Biopreparation Ecologis Activator for wastewater treatment plants

**Biopreparation Ecologis Activator is designed to support the start-up of wastewater treatment plants.** When the wastewater treatment plant is new or has been out of operation for a long time, the bacterial growth process has been inhibited or has not yet taken place. Therefore, start-up without support is delayed. The biopreparation ensures high purification performance. Thanks to the micro-organisms, the treatment plant operates optimally. The preparations are also used in: septic tanks, sewers, toilets, primary settling tanks, drains and grease traps.

**Packaging - a bucket weighs 1000 g. It contains 4 suggested doses of biopreparation.**

**Biopreparation Activator is recommended for start-up and recommissioning of domestic wastewater treatment plants.** It causes rapid growth of the bacterial flora and reactivates the micro-organisms present. Bacterial growth takes place in a very short time. Their quantity is fully sufficient for proper operation of the treatment plant. Thanks to them, the plants immediately start working properly. A great advantage of the activator is the ease of application - simply pour a portion into the toilet. It can be used universally for treatment plants:

- Drainage,
- Tunnel plants,
- Aerated,
- Septic tanks,

- Grease traps,
- Absorbent wells.

## How to use the Ecologis Activator [bio-preparation](#)

Dissolve a portion - approx. 200 g - in water and pour into the toilet bowl.

We always encourage our customers to use bio-preparations. They can work wonders in even very complex installations. Even the first use has great effects. When purchasing your wastewater treatment plant, get a biopreparation right away.

Your wastewater treatment plant is not working properly, the sewage still smells unpleasant and the infiltration is not efficient? **Before you call in a maintenance crew, whose services are costly, try Ecologis.** Regular use of the bio-preparation maintains the full performance of your equipment. The effect can surpass your expectations. This will save you money and time.
